SUMMARY

Frontend engineer with 3.5 years building a creator monetization platform serving 30K+ users. Depth in multi-provider payments, HLS media streaming, real-time video and chat, and virtualization-driven performance work.

EXPERIENCE

Ink In Caps — Mumbai, India

Software Development Engineer • Aug 2023 – Present

Web Developer Intern • Jan 2023 – Jul 2023 (converted to full-time)

Frontend engineer across three production products on a 10+ contributor team. Reviewed PRs and mentored two junior developers through their first production releases.

KNKY — Creator Monetization Platform • 30K+ users

Next.js 14 (App Router), TypeScript, Redux Toolkit, TanStack Query/Virtual, Tailwind CSS, SCSS

- Owned the payments and subscription surface: multi-provider checkout spanning card tokenization and regional bank-transfer methods, with backend-driven failure states and guest checkout; plan state transitions across upgrade, downgrade, trial and lifetime tiers; and wallet, tipping and revenue-split flows.
- Built the Stories and Media Vault subsystems: HLS adaptive-bitrate playback tuned for slow connections, a gesture-driven 3D story carousel, a virtualized folder/asset library, and resumable large-file S3 uploads via Uppy + tus.
- Integrated LiveKit for live video/audio rooms and Socket.IO / XMPP for chat, alongside a typed in-app notification system backed by Firebase push.
- Added two-factor authentication over OTP, client-side payload encryption for API traffic, and token lifecycle handling with scheduled silent renewal.
- Cut load and interaction cost with dynamic hls.js imports, lazy Firebase initialization and virtualized rendering across every long list. Also introduced a shared ModalPortal abstraction that replaced ad-hoc modal wiring app-wide.

KNKY Admin Console • sole frontend engineer

Vite, React, React Router 7, Material UI, TanStack Table, ApexCharts

- Built the console as its only frontend engineer, covering architecture, routing, state and build setup. Replaced the previous Next.js/Webpack app with a Vite SPA, roughly halving build times for daily development.
- Built a role-based permission model with server-driven grants resolved into client-side route and action guards.
- Built transaction search over large datasets with server-side pagination, compound multi-field filters and unbounded CSV export, plus reporting dashboards aggregating earnings and payouts across accounts.

KNKY Agency Portal • B2B

Vite, React, Radix UI, Tailwind CSS

- Modelled multi-tenant access, including role definitions, many-to-many employee-to-creator assignment, and an invitation flow covering pending, accepted and cancelled states.
- Built analytics, earnings breakdown and product-listing surfaces, using virtualized rendering and debounced search to keep large lists responsive.

Heftyverse — Metaverse Integration Platform

Angular, Socket.IO, WebRTC, RxJS

- Built the Angular web layer bridging the browser and a Unity 3D runtime, handling bidirectional real-time messaging for chat, leaderboards and event state. Defined the web-to-engine message contract with the Unity team.
- Integrated a WebRTC video streaming SDK for live in-world video, handling connection lifecycle and reconnection, and built session analytics for concurrency and engagement.

TECHNICAL SKILLS

Languages TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS

Frameworks React 18, Next.js 14, Angular, Redux Toolkit, React Router, RxJS, Node.js

UI & Data Tailwind CSS, Radix UI, Material UI, ShadCN, TanStack (Query / Table / Virtual), React Hook Form, ApexCharts

Media & Realtime HLS.js, LiveKit, Socket.IO, WebRTC, XMPP, Uppy / tus resumable uploads, Firebase

Tooling & Testing Vite, Webpack, Vitest, React Testing Library, Git, CI/CD, Amplitude, PostHog, Figma

EDUCATION

Master of Computer Applications (MCA) — Sandip University, Nashik • June 2026

Bachelor of Commerce (BCom) — Yashwantrao Chavan Maharashtra Open University • Aug 2022

Full Stack Web Development — SPARK IT Training Institute, Pune • Dec 2022
