SUMMARY

Frontend engineer with 3.5+ years building and shipping production web products in React, Next.js and TypeScript. I own the payments and subscription module of a creator platform with 30K+ users and 45K+ transactions a month, and built its internal admin console as the only frontend engineer. Used to taking a feature from design through to release in a small product team.

TECHNICAL SKILLS

Languages TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS

Frontend React, Next.js (App Router), Angular, Redux Toolkit, TanStack Query / Table / Virtual, React Hook Form, React Router

UI Tailwind CSS, Radix UI, shadcn/ui, Material UI, Framer Motion, GSAP, responsive design

Media & Real-time HLS.js, LiveKit (WebRTC), Socket.IO, XMPP, Uppy / tus resumable uploads, Firebase

Backend & Tooling Node.js, Express, MongoDB, REST APIs, Git, Vite, Vitest, React Testing Library, AWS CodeBuild, Amplitude

EXPERIENCE

Ink In Caps

Software Development Engineer

Mumbai, India

Aug 2024 – Present

Junior Software Development Engineer

Aug 2023 – Jul 2024

Web Developer Intern

Jan 2023 – Jul 2023 • converted to full-time

- Frontend engineer on three production products for KNKY, a creator monetization platform with 30K+ users, in a team of ten.
- Own the payments and subscription module from checkout screens to failure handling. It handles 45K+ transactions and 9.5K+ subscription payments a month.
- Sole frontend engineer on the admin console that finance and operations use to run the platform: setup, architecture and CI builds.
- Review pull requests across the team's frontend work.

SELECTED PROJECTS

KNKY — Creator Monetization Platform • lead frontend contributor • live

Next.js 14 (App Router), TypeScript, Redux Toolkit, TanStack Query / Virtual, Tailwind CSS, HLS.js, LiveKit

- Built checkout across four payment methods (tokenized cards, iDEAL, Bancontact, Centrobill) with guest checkout, transaction cancellation and backend-driven failure states, so buyers in different countries can pay with a local method.
- Built subscription management for upgrades, downgrades, trials, lifetime tiers and retention offers, plus wallet and tipping flows.
- Built Stories and the Media Vault (20K+ stories posted a month): HLS adaptive-bitrate playback tuned for slow connections, a gesture-driven story carousel, and resumable S3 uploads with Uppy and tus.
- Integrated LiveKit for live video and audio rooms and Socket.IO / XMPP for chat. Added OTP two-factor authentication and scheduled silent token renewal.
- Reduced first-load cost on mobile by importing hls.js dynamically and initializing Firebase lazily, and virtualized long lists so vaults with thousands of items scroll smoothly.

KNKY Admin Console • sole frontend engineer • internal

React 19, React Router 7, TypeScript, Vite, Material UI, Material React Table, Redux Toolkit, AWS CodeBuild

- Replaced the previous Next.js/Webpack app with a Vite SPA, roughly halving build times, and set up separate test, staging and live builds on AWS CodeBuild.
- Built the transactions and payout modules for finance: revenue charts, server-side pagination, compound filters stored in the URL so a view can be shared, and chunked CSV export that no longer freezes the tab on large histories.
- Built role-based access control, with server-driven grants resolved into client-side route and action guards.

KNKY Agency Portal • frontend engineer • live, B2B

React 18, Vite, TypeScript, Radix UI, Tailwind CSS, TanStack Virtual, React Hook Form, ApexCharts

- Built creator invitations with three revenue-share models and per-feature permissions, and employee management with role-based routing and many-to-many staff-to-creator assignment.
- Built earnings and analytics pages with date-range filters, and added AES decryption in the Axios interceptor so encrypted API responses needed no changes at call sites.

Heftyverse — Metaverse Platform • frontend engineer

Angular, RxJS, Unity WebGL, Socket.IO, Stripe

- Built the Angular layer over Unity 3D worlds and defined the two-way message contract with the Unity team, covering chat, leaderboards, rewards and an in-world store with Stripe checkout.

EDUCATION

Master of Computer Applications (MCA) Sandip University, Nashik • part-time, 5 semesters • CGPA 7.85

2023 – 2026

Full Stack Web Development SPARK IT Training Institute, Pune

Dec 2022

Bachelor of Commerce (BCom) Yashwantrao Chavan Maharashtra Open University
